SUMMARY

Computer Science student who loves math and finding patterns hidden in data. I enjoy breaking down difficult questions and building solutions to answer them, and I stay sharp by constantly learning and experimenting with machine learning on my own machines.

EDUCATION

B.S. in Computer Science May 2027
Arizona State University (Online)
Relevant coursework: Probability & Statistics, Applied Linear Algebra, Calculus I–III, Discrete Mathematics, Data Structures & Algorithms, Cybersecurity

TECHNICAL SKILLS

- **Languages:** Python, SQL, Java, C++, Bash
- **Machine learning:** TensorFlow, Keras, scikit-learn; neural networks, reinforcement learning, dimensionality reduction (PCA, t-SNE), k-means clustering, regression, decision trees
- **Data:** pandas (cleaning, merging, reshaping), NumPy, matplotlib, Jupyter, Google Colab, Kaggle
- **SQL & databases:** MySQL; joins, subqueries, CTEs, window functions
- **Math:** Probability & statistics, linear algebra, Calculus I–III, discrete math
- **Tools:** Excel (formulas, linear regression), Git & GitHub, Docker, Linux, AI-assisted development (Claude Code)

PROJECTS

DigiClips: Media Search Platform 2026
DigiClips Inc. (ASU capstone) | Scrum team | REST API, MySQL | digiclipsproject.com
- Media-monitoring platform that lets journalists search recorded TV, radio and print coverage by keyword; built and maintained by university capstone teams for a startup company.
- Member of the subscriber-focused Scrum team, which shipped media analytics charts with filtering metrics and export, plus a subscriber dashboard for saved media and campaign tracking.
- Fixed a MySQL-backed search API that returned fewer rows than requested when filters consumed the query limit, by over-fetching until the page filled.
- Fixed a privacy bug where a user's searches survived logout and appeared for the next person on the same browser, by making logout clear the app's stored search data and saved presets.

Visualizing Handwritten Digits with t-SNE 2024
Python, NumPy, scikit-learn, Plotly | Jupyter
- Reduced 784-dimension MNIST digit images to three dimensions with t-SNE on a random 3,000-image sample, then plotted them in an interactive 3D chart colored by digit to show how the ten digits separate into clusters.

Self-Hosted Home Server 2024–Present
ThinkPad T470, Ubuntu Server | Docker, Caddy, Tailscale, WireGuard, Python, systemd, Bash | fellobello.github.io
- Wrote a Python script that renames and files new media, plus a health-check script and nightly backups on systemd timers.

EXPERIENCE

Technical Support & Customer Service Agent 2023
Afni (Verizon & AT&T accounts) | Tucson, AZ
- Troubleshot phone, connectivity and account issues for Verizon and AT&T customers over the phone, walking them through fixes step by step.
- Met performance targets for issue resolution, customer retention and sales while de-escalating frustrated callers.

Other work: Dietary Aide, Avila Senior Living (2026) • Retail Associate, Cloud Slingers (2025–2026) • Customer Service Representative, Best Buy (2023) • Barista & Assistant Manager, Ike's Coffee and Tea (2022–2023) • Food Prep & Cashier, Bruegger's Bagels (2020–2021)
